FOR IMMEDIATE RELEASE**ANILAM[®] Introduces the New 6000M CNC Control Sales Video**

JAMESTOWN, NY, July 2005— ANILAM is proud to introduce a new sales video for the 6000M Digital CNC control system. The 6000-Series CNC is the latest design in CNC systems and is a complete digital solution for your milling machine or vertical machining center. Featuring an integrated CPU, the 6000 includes axes and spindle drive amplifiers. Incorporating dual processors, the 6000 CNC makes use of today's latest 586 CPU and a high-tech DSP processor. With ANILAM's advanced user-friendly software, high precision parts can now be machined faster, thanks to the 6000M.

Machinists can program conversationally in plain language through g-code commands, through integrated CAM systems or by simply downloading a DXF file and the 6000M will complete the tool path. Thanks to ANILAM's advanced digital control, high speed machining is easy, fast, and accurate. A free copy of the 6000M sales video is available on request.

About ANILAM products—Backed by a comprehensive warranty, ANILAM's CNC Series Systems are supported by a worldwide network of trained and qualified personnel. ANILAM's CNC products are manufactured in the United States. For more information, visit ANILAM's web site at <http://www.anilam.com> or contact ANILAM at 716-661-1899. ACU-RITE COMPANIES INC. One Precision Way, Jamestown, NY 14701.
